Rennes, 6th July 2015

Subject: Invitation for a research stay

To whom it may concern,

I am pleased to invite Carlos Ruiz for a research stay of six months from 1st September 2015 to 29th February 2016. Carlos Ruiz is a PhD student at the University of Guadalajara in Mexico and holds a Master of TU Dresden in Germany. His thesis is directed by Professor Hector Duran-Limon from the University of Guadalajara and co-supervised by me.

This research stay will strengthen the cooperation between the French and Mexican research teams, which has gradually developed over the past three years. Indeed, the teams have recently submitted a joint ANR/CONACYT project proposal as well as two research articles. The research stay will also significantly contribute to the advancement of Carlos' thesis work, which involves the use of software product lines for configuration and reconfiguration in cloud environments. The main purpose of the stay is to perform a full-scale experimental evaluation of the prototype developed by Carlos.

For these reasons, we wish to welcome Carlos Ruiz in the Myriads research team of IRISA in Rennes.

Best regards,

Nikos Parlavantzas,
Associate Professor, INSA Rennes
Myriads research team, IRISA / INRIA Rennes
